

# Aether One™ – Commercialization Brief (v1.1 Executive Edition)

Transforming a Technical Breakthrough into a Strategic Asset  
Prepared November 2025

## 1. Executive Summary

Aether One™ is a quantum-secure, RISC-V-based edge intelligence platform built around the TrustCore NX SoC (7 nm FinFET). It fuses three technological frontiers into one validated silicon architecture:

- Custom RISC-V + TPM 2.0 + AES-512: Hardware Root of Trust for field-grade security.
- RVV-Accelerated Post-Quantum Crypto: Kyber & Dilithium in vector hardware → ~5× faster than software PQC.
- 32 TOPS Neural AI Engine: TVM-optimized kernels for sensor fusion and autonomous edge operations.

The ASIC design enters engineering-sample phase (Q1–Q3 2026). Aether One™ is positioned not only as a product but as a licensable deep-tech IP platform for defense, satcom, and semiconductor sectors.

## 2. Target Market Segments & Business Models

**Defense & Secure Edge Devices:** 3–10 M USD per license + 1–2 M USD co-development (Bittium, Thales, Lockheed Martin).  
**Satcom & Critical Infrastructure:** 2–5 M USD per license + 0.25 USD/unit royalty (Starlink, OneWeb, ESA).  
**Semiconductor IP Licensing & Acquisition:** 15–25 M USD for full IP sale or 3–5 M USD + 0.30 USD royalty (SiFive, Imagination Tech).

| Segment                | Deals (2026–2028)  | Up-front Revenue (M USD) | Royalty (M USD) | Total (M USD) |
|------------------------|--------------------|--------------------------|-----------------|---------------|
| Defense Licensing      | 3–4 partners       | 25                       | 5               | ≈30           |
| Satcom Partnerships    | 2 major            | 8                        | 2               | ≈10           |
| Semiconductor IP Sales | 1 full acquisition | 20                       | —               | ≈20           |
| Total Estimate         | —                  | ≈53                      | ≈7              | ≈60           |

## 3. Strategic Roadmap

ASIC RTL Finalization → FPGA Demo → 7 nm Tape-Out → Defense/Satcom Partnerships → IP Licensing Launch

## 4. Strategic Actions (Q4 2025 – Q2 2026)

1. Patent Filing: TrustCore NX architecture & RVV-PQC accelerators.
2. Whitepaper Release: Engineering Sample Overview.
3. Targeted Outreach: Bittium, Thales, SiFive – NDA briefings.
4. FPGA Showcase: RISC-V Summit Europe & Embedded World 2026.
5. Financial Partnering: Business Finland / ESA BIC / deep-tech VC.

## 5. Strategic Outlook

Aether One™ bridges three megatrends: RISC-V Architecture, AI Acceleration, and Quantum-Secure Compute. The validated TrustCore NX IP positions the project as a prime licensing and acquisition target for the 2026–2028 cycle. Projected commercial value: ≈60 M USD direct revenue + >100 M USD IP valuation by 2028.
