

LR 2030 – ONE PAGE STRATEGY

“Structure before will.”

1. RSM – Debt Growth Cap

Debt may grow max 1.5% of GDP per year. Exceeding triggers VRF■96h freeze and returns proposal for revision.

2. LRM – Baseline Restoration

All crisis■era expenditures revert to 2020-level + inflation + demographic shift. Any excess requires S■score ≥ 68 .

3. RRM – Interest Cost Lock

Interest costs may not exceed 4% of the state budget. Exceeding triggers VRF■96h and RAP■prioritisation.

4. IRS – Intergenerational Fairness Lock

No more than 20% of deficit may be shifted to future generations unless R–S–E average ≥ 0 .

CWE Cycle (Orientation → Work → Reflection)

All decisions follow same cycle for transparency and predictability.

Impact by 2030

- State debt: <170 bn€
- Interest cost: 3–4 bn€/year
- Taxes remain stable
- Services stabilise
- Crisis readiness restored

Summary: The framework removes the need for political will by enforcing automatic structural discipline.
